MEM-9891
LOW PROFILE INDEPENDENT LOWERS HARDWARE KIT FOR
COVERED FORKS

TOOLS REQUIRED: 3/16" Allen wrench (provided)

1. Cover the front fender with a towel, in case you drop something.
2. Attach the lowers plastic to the lowers mounting plates using the pre-assembled bolts and button nuts. Install the components in the order shown in. (see Figure 1)

NOTE: The neoprene washers have been replaced by **FOUR** Santoprene grommets. The rubber grommet should be inserted through the holes in the windshield so that the flat round part of the grommet lays flat on each side of the windshield.

3. The mounting plate tabs should point away from each other when installed correctly. (see Figure 2)

Note: The mounting plates can be mounted pointing up, for those applications where the windshield is too short to reach them other wise

4. Protective tape has been applied to the inside of the clamps. Loosely install the two fork clamps onto the fork covers. **MAKE SURE THE LOWERS WILL CLEAR ALL FENDERS, RADIATORS, OIL COOLERS AND TURN SIGNALS WHEN INSTALLED.** Attach the lowers mounting plates to the fork clamps. Adjust height, angle and position of the clamps and then tighten them.

CARE AND CLEANING

To clean your windshield, wash it with warm water and a mild, non-abrasive, dishwashing liquid. Use a soft cloth such as a T-shirt or flannel cloth.

To protect your windshield, use NOVUS #2 to remove minor scratches, or use Memphis Shades Shinola polish specially designed for plastic. NEVER use glass cleansing agents, they may cause severe damage to your windshield.

Never use any petroleum-based chemicals, or cleaning agents with ammonia. This includes Rain-X, brake fluid, acetone and gasoline.
