

If you have a digital camera take pictures at each stage of the disassembly to aid you later.

**UNPLUG MACHINE!** Remove screw (#62) in the reservoir fill funnel & remove top by lifting from the rear. Disconnect electrical leads to pump (not shown in drawing, but they just pull off).

Disconnect the hose connections from both ends of pump (#9 & #10). Remove the four screws (#63) holding the rubber pump-holders (#42) to the chassis; make sure to retain the metal tabs (#14) under the screws.. Lift the pump out of the machine. Unscrew (turn counter-clockwise) the fittings (#40 & #43) on each end of the pump & pull off the rubber holders (#42). Attach rubber holders to new pump, screw fittings (clockwise) into pump, put four screws through the metal tabs and rubber holders & attach pump to chassis. Reconnect water hoses & electric leads. Plug in the machine & make espresso
