

# Female mtDNA Descendants of Maria Cayetana FLORES VALDEZ First 10 generations

This is a part of a Citizen science project to identify the mtDNA of our kindred group ancestors. Maria Cayetana met the minimum requirement. That is what I told the late Ernesto Uribe some years ago after I created an ancestor book for him. Looking at his mtDNA line it extended from him back 10 generations to Maria Cayetana Flores Valdez. He was willing to have his DNA tested so we ordered a full sequence mtDNA test for him and waited for the results.

We know from the church records that Maria Cayetana married in 1707 to Juan Garza in Monterrey, Nuevo Leon, Mexico. The marriage record did not have much information, nothing about the bride and groom's race or who their parents were. We know a lot about Juan Garza thanks to the 15 marriage investigations he appears in. Maria Cayetana appears in four marriage investigations, always as his spouse and never telling us who her parents are. Her children Joseph Antonio, Maria Francisca Javiera, Maria Gertrudis and Maria Josefa married cousins that triggered marriage investigations. All of these children were labeled as Espanol. All were related on their father's side of the family. That was a good clue. Maria Cayetana was not part of this local Espanol gene pool. Her mtDNA test results C1c6 tells us that her mtDNA line is Native American. The kindred group database currently has 6,431 descendants of hers. Based on mitochondrial inheritance rules we have 504 females found in 10 generations with her mtDNA. This report has all 10 generations.

Ernesto, wanting to know more, purchased a familyfinder DNA test and learned that he was 7% Native American. Put another way; his 7th great grandmother, Maria Cayetana was one of his 2,048 7th great grandparents of which 143 were Native Americans. Actually, Ernesto descends from Maria Cayetana 2 ways and from Isabel Olea his 10th to 14th great grandmother another of his known Native American ancestors 46 ways.

FamilyTreeDNA mtDNA results are Haplogroup - C1c6

Someday this citizen science effort may contribute to discerning the pathway that this twig of haplogroup C came to Monterrey, Mexico. Does that path lead back to the earliest European Native American unions in the Caribbean, unions between Spaniards and Tlaxcaltecas in the conquest of Mexico or does the path go further back in time before the conquest from one of the many Native American tribes in the Nuevo Leon region?
