## Comprehensive Growth Management Plan Transportation Level of Service in 2024 Alternative #2 (Does Not Include Cities' Overrides)

**Key**

- ▲ Level of Service Constraint (V/C Ratio greater than 0.9)
- Adopted 2004 UGA boundary
- City Limits
- Urban low density residential
- Urban medium density residential
- Urban high density residential
- Mixed use
- Mixed use/residential-Battle Ground
- Mixed use/employment-Battle Ground
- Campus employment-Battle Ground
- Commercial
- Employment center / Business Park
- Industrial
- Public facilities
- Parks/open space
- Airport
- Urban Reserve
- Industrial urban reserve overlay
- Urban reserve overlay
- New industrial urban reserve overlay
- New urban reserve overlay

This map depicts road segments that are projected to have a low level of service during P.M. peak hours in 2024. Low level of service is expected when the volume of traffic exceeds 90% of the road's capacity. There would likely be many intersections that would also have a low level of service, but the transportation model does not analyze intersection level of service.

This analysis is based on the Alternative 2 land use map using results from the Vacant Buildable Lands Model. It does not include any overrides by the cities, where planned projects would result in higher or lower household and job numbers. The roadway network assumed for 2024 includes all of the projects programmed in the adopted Metropolitan Transportation Plan.
